Art Unit: 2634

DETAILED ACTION

1. Claims 1-to-16 are pending in the application.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-to-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Regarding to Claims 1-to-16, the specification does not disclose in a full, clear and exact terms as to How the components connected as described in the specification and Figures 2-3 results in the complex signal converted from the real signal. It is also not clear as to how the selector selecting the "I" branch for a period of four times the band-center frequency of the incoming signal and selecting the "Q" branch for a period of two times the band-center frequency of the incoming signal; it is not clear how this uneven selection of time between the "I" & "Q" branches results in a quadrature between the two branches. It is again not clear how the multipliers "14" & "15" function or if it works as a mixer it is again not clear how the mixer works with a square wave input and a sinusoid input being mixed; more details on the mixer (Fig. 2, elements 14 & 15) operation Art Unit: 2634

are required, furthermore it is again not clear how inverting (multiplying by "1" & "1") the oscillator signal produces the "I" & "Q" signal.

In regards to Figure 3, a dc-offset (Fig. 3, element 23) is implemented so as to avoid removing the DC-component at the threshold circuits (Fig. 3, elements 14 & 15), however these components are still implemented in the embodiment as described in Figure 3.

4. Claims 1-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter, which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The claims are a single means claims i.e., where a means recitation does not appear in combination with another recited element of means, is subject to an undue breadth rejection under 35 U.S.C. 112, first paragraph. In re Hyatt, 708 F.2d 712, 714-715, 218 USPQ 195, 197 (Fed. Cir. 1983) (A single means claim which covered every conceivable means for achieving the stated purpose was held nonenabling for the scope of the claim because the specification disclosed at most only those means known to the inventor.). When claims depend on a recited property, a fact situation comparable to Hyatt is possible, where the claim covers every conceivable structure (means) for achieving the stated property (result) while the specification discloses at most only those known to the inventor. See MPEP 2164.08(b).

Art Unit: 2634

Response to Arguments

5. Applicant's arguments filed on September 24th, 2004 have been fully considered but they are not persuasive. In regards to the arguments presented in the amendment it is still not clear How the components connected as described in the specification and Figures 2-3 results in the complex signal. It is recommended that the applicant provide further detail in the specification as to how one of ordinary skill in the art would get the result as is claimed i.e. converting a real signal into a complex signal. A drawing of the waveforms of the signals into and out of each component, as described in Figures 2 & 3) would help clarify this issue. Furthermore, the applicant is encouraged to discuss the invention with the office in an interview to clarify the invention.

Conclusion

- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sudhanshu C. Pathak whose telephone number is (571)-272-3038. The examiner can normally be reached on M-F: 9am-6pm.
 - If attempts to reach the examiner by telephone are unsuccessful, the
 examiner's supervisor, Stephen Chin can be reached on (571)-272-3056
 - The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
